Introduction

These instructions will guide you through installing and running an HPCC\(^1\) System on a single node inside a Linux virtual machine running on a Windows host.

Packaged to run inside a virtual machine, this version provides a hands-on experience with an HPCC system. You can experiment with it and even create real-world data analytics applications-all on your desktop or laptop PC.

This version includes the tools and functionality of an HPCC without the need for a physical cluster of servers. It provides enough for you to evaluate an HPCC system and learn to use ECL\(^2\). Naturally, you do not get the power of parallel processing, but you can use this version as an evaluation, learning, and experimentation tool.

Reading this document in its entirety before beginning. The steps in this document can take an hour or two, depending on your download speed.

\(^1\)High Performance Computing Cluster (HPCC) is a massively parallel processing computing platform that solves Big Data problems. See [http://hpccsystems.com/Why-HPCC/How-it-works](http://hpccsystems.com/Why-HPCC/How-it-works) for more details.

\(^2\)Enterprise Control Language (ECL) is a declarative, data-centric programming language used to manage all aspects of the massive data joins, sorts, and builds that truly differentiate HPCC (High Performance Computing Cluster) from other technologies in its ability to provide flexible data analysis on a massive scale.
System Requirements

Running HPCC in a virtual machine requires (at minimum):

- A personal computer running Windows XP, Vista, Windows 7 (either 32- or 64-bit)
- A minimum of 2 GB ram, with at least 1.5 GB of free memory available. We recommend 4 GB or more
- Intel Pentium D (or better) or AMD Athlon64/Opteron/Phenom processor
- Minimum 5 GB of available disk space, we recommend 20 GB
- A virtualization software package: VMware® Player or Server (version 3.0 or later) or Oracle VM VirtualBox (version 4.0 or later).
- Internet Explorer® 8, Google Chrome 10, or Firefox™ 3.0 (or later)

Users should have familiarity with installing and running Windows applications.
Getting the Tools and the VM Image

To run the virtual machine version of the HPCC System, you need virtualization software. These packages allow you to run virtual images inside a single host. There are a several different vendors who make virtualization software, while any or all of these could work, we support the following products:

- VMware's Virtual Machine
- Oracle's VM VirtualBox
VMware Virtual Machine

The VMware player from VMware® is a virtualization software you can use to run the HPCC virtual machine.

In the following sections, you will:

- Download and install the VMware Player
- Download the HPCC virtual machine image from HPCC Systems.
- Open and import the image in the VMware Player

Once you have completed these steps, you can evaluate the HPCC Platform and learn how to use it.

Download and Install the VMware Player

If you already have VMware Player installed, you can skip this section and go to the section called “Get the latest HPCC Virtual Image File”.

2. Click on download link, then follow the instructions to download the VMware Player for 32-bit and 64-bit Windows.
   
   Registration is required, but the player is free.

3. Download the VMware Player (save to a folder on your machine).

4. Follow VMware’s on-screen instructions and install the VMware Player.
Get the latest HPCC Virtual Image File

1. Download the latest HPCC virtual machine image file from:

   http://hpccsystems.com/download/hpcc-vm-image

   **Note:** You may need to register to login.

2. Save the file to a folder on your machine.

3. Open the VMware Player.

4. From the **Player** menu, select **File**, then **Open...**

5. Go to the folder where you saved the downloaded file and select it.

   For example (HPCCSystemsVM-n.n.n.n.ova, where n.n.n is the version number).

   The .ova file should open an *Import Virtual Machine* dialog window providing for the name of the new virtual machine, and the storage path of the virtual machine you selected.

   **Figure 1. Import Virtual Machine**

6. Press the **Import** button to import the virtual machine into the VMware Player.

   Wait for the HPCC virtual machine to load to the desktop in the VMware player. This may take a few minutes.

   **Note:** The first time you use the VM Player, you must accept the license agreement. You may also be prompted to install add-ons, but they are not necessary for the HPCC virtual machine.

7. At the VMware Player main window the new virtual machine you just imported is now listed. Double-click on that virtual machine to start it.
8. Once the VM initialization completes, you will see a window similar to the following:

**Figure 2. VM Welcome Screen**

![VM Welcome Screen](image)

- Your virtual IP address could be different from the ones provided in the example images. Please use the IP address provided by your installation.

Do not resize this window, you will not interact with it. In addition, there is no need to Login.

**TIP:** If you do click on the window, it will capture your keyboard/mouse. Press `ctrl+alt` to return control of your mouse.
VM VirtualBox

Oracle's virtualization software, VM VirtualBox is supported for running the HPCC virtual machine image.

In the following section(s), you will:

- Download and install the VM VirtualBox
- Download the HPCC virtual machine image from HPCC Systems.
- Open and import the image in VM VirtualBox

Download and Install the VM VirtualBox

If you already have the VM VirtualBox installed, skip to step number 6, and verify the network configuration settings.

2. Click on the appropriate link for your operating system. For example VirtualBox for Windows hosts.
3. Download the VirtualBox Installation file. Save to a folder on your machine.
4. Double-click on the installation file to install VirtualBox.
5. Follow the on-screen instructions to complete the installation of VirtualBox.
6. Start the VM VirtualBox application.
7. Click on the Settings Icon, this will open up the settings dialog window.

Figure 3. VirtualBox Settings Icon

8. Select the Network menu option. On the Adapter 1 tab check the Enable Network Adapter box, and set the Attached to: option to NAT.
Figure 4. VM VirtualBox Network Adapter 1

**Note:** These settings may be set as required by default. If so just verify that they are correct.

9. From the same **Network - Settings** window, select the tab for **Adapter 2**. Check the **Enable Network Adapter** box, and set the **Attached to:** option to **Host-only Adapter**.

10. Press the **OK** button.

11. From the **File** menu, select **Preferences**...

The **VirtualBox - Settings** dialog displays.
12. Select **Network** from the list on the left side of the window.

13. Double-click on the **VirtualBox Host-Only Ethernet Adaptor**.

14. From the **Network Details** window, select the **DHCP Server** Tab and check the **Enable Server** box.

**Figure 6. Network Details**

**Note:** You may need to add IP Address values to the Lower Address Bound and Upper Address Bound fields. The address the VM uses is in the private IP address range of 192.168.x.x
15. Press the OK button on the Network Details dialog box, then press the OK button on the VirtualBox - Settings box.

**Import the HPCC Virtual Image File**

1. Download the latest HPCC virtual machine image file from:

   [http://hpccsystems.com/download/hpcc-vm-image](http://hpccsystems.com/download/hpcc-vm-image)

   **Note:** You may need to register to login.

2. Save the file to a folder on your machine.

3. Open VM VirtualBox.

4. From the File menu select Import Appliance... (Ctrl + I)

5. Press the Open appliance button from the dialog to select the appliance to import.

6. Navigate to the folder where you saved the downloaded file and select it.

   For example (HPCCSystemsVM-n.n.n.n.ova, where n.n.n is the version number).

7. Press the Open button to start the import. Follow the prompts in the import process pressing Next as appropriate, then press Import.

   Wait for the HPCC virtual machine to import. This may take a few minutes.

8. At the main window, the newly imported virtual machine is now listed.

9. Double-click on that virtual machine to start it.

   **TIP:** If you get any Network Error messages, please review the steps in the section called “Download and Install the VM VirtualBox” and verify that all the network settings are set appropriately.
10. Once the VM initialization completes, you will see a window similar to the following:

**Figure 7. VirtualBox Welcome Screen**

![VirtualBox Welcome Screen](image)

> Welcome to the HPCC Platform VM Version 4.0.0

> Please use the following credentials to login to the shell.

> User: hpccdemo

> Pass: hpccdemo

> (This user has full passwordless sudo rights.)

> EclWatch: http://192.168.3.01:8010

> HPCC-Platform login:

---

⚠️ Your virtual IP address could be different from the ones provided in the example images. Please use the IP address provided by **your** installation.

---

Do not resize this window, you will not interact with it. In addition, there is no need to Login.

**TIP:** If you click on the window, it can capture your keyboard/mouse. Press the **Right Ctrl** to regain control of your mouse.
Running the HPCC VM

In this section, we will access the HPCC using the web-based interface: ECL Watch. From ECL Watch, we will download the ECL IDE. If you already have the ECL IDE installed, you can skip this section and continue at Running the HPCC ECL IDE when you had a previous version installed.

1. In your browser, go to the ECL Watch URL displayed (circled in red) in Figure 1, VM Welcome Screen. For example, http://nnn.nnn.nnn.nnn:8010, where nnn.nnn.nnn.nnn is your Virtual Machine's IP address.

|!| Your virtual IP address could be different from the ones provided in the example images. Please use the IP address provided by your installation. |

---

1ECL Watch is a Web-based interface to your HPCC system. It enables you to examine and manage many aspects of the HPCC and allows you to see information about jobs you run, data files, and system metrics.

2The ECL IDE (Integrated Development Environment) is the tool used to create queries into your data and ECL files with which to build your queries. This is a Windows application.
2. From ECL Watch page, click on the **Resources** link in the menu on the left side.

**Figure 8. ECL Watch Resource Page**

Follow the link to the HPCC System's portal.

3. Click on the **ECL IDE** link.

4. Download the **ECL IDE for Windows** from the *Community ECL IDE* download page.

5. Install the ECL IDE, following the prompts in the installation program. Once the ECL IDE is installed successfully, you can proceed.
Running the ECL IDE for the first time

In this section, we will configure the ECL IDE.

1. Open the ECL IDE, from your start menu. (Start >> All Programs >> HPCCSystems >> ECL IDE).

You can create a shortcut on your desktop to provide quick access to the ECL IDE.

2. Enter the IP Address shown in Figure 2, “VM Welcome Screen” for the server in the Server box (as shown in Figure 9, “ECL IDE Preferences”) and press the OK button.

Figure 9. ECL IDE Preferences
3. Enter the **Login ID** and **Password** provided in the Login dialog.

<table>
<thead>
<tr>
<th>Login ID</th>
<th>hpccdemo</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>hpccdemo</td>
</tr>
</tbody>
</table>

**Figure 10. Login Window**

4. Press the **OK** button.

At this point you are now connected and ready to work with the HPCC!
Running the HPCC ECL IDE when you had a previous version installed

1. Open the ECL IDE, from your Start menu. (Start >> All Programs >> HPCCSystems >> ECL IDE >> ECL IDE)

2. Press the Preferences button in the Login dialog that displays upon start up.

Figure 11. Login Window
3. Enter the IP Address shown in Figure 2, “VM Welcome Screen” for the server in the Server box (as shown in Figure 12, “ECL IDE Preferences”) and press the OK button.

**Figure 12. ECL IDE Preferences**

![ECL IDE Preferences](image)

4. Enter the Login ID and Password provided in the Login dialog.

<table>
<thead>
<tr>
<th>Login ID</th>
<th>hpccdemo</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>hpccdemo</td>
</tr>
</tbody>
</table>

**Figure 13. Login Window**

![Login Window](image)
5. Press the **OK** button.

   You are now connected and ready to work with the HPCC!
Write some ECL

Let's write, compile, and execute a simple "Hello World" program on our HPCC.

1. Open ECL IDE, from your Start menu. (Start >> All Programs >> HPCCSystems >> ECL IDE or use the desktop shortcut, if you have created one.)

   The Login Window displays.

   Figure 14. Login Window

2. Provide your credentials (hpccdemo) then press the OK button.

3. Open a new Builder Window (CTRL+N) and write the following code:

   OUTPUT('Hello World');

   This could also be written as:

   'Hello World';

   In the second program listing, the OUTPUT keyword is omitted. This is possible because the language is declarative and the OUTPUT action is implicit.
4. Select **thor** as your target cluster.

**Thor** is the Data Refinery component of your HPCC. It is a massively parallel computer cluster, optimized for sorting, manipulating, and transforming massive data. This process is also known as ETL (Extract, Transform, and Load)

**Figure 15. Select target**
5. Press the syntax check button on the main toolbar (or press F7).

**Figure 16. Syntax Check**

![Syntax Check](image-url)

A successful syntax check displays the "No Errors" message.
6. Press the **Submit** button (or press CTRL+ENTER).

**Figure 17. Completed job**

![Completed job](image)

The green check mark indicates successful completion.
7. Click on the workunit number tab and then on the Result 1 tab to see the output.

**Figure 18. Completed job output**

![Completed job output](image-url)
Working with ECL

Now that you have submitted some ECL code, it's time to try some more complex operations.

The following examples are provided to get you started.

**ECL Example: Anagram1**

This example takes a STRING and produces every possible anagram from it. This code is the basis for a second example which evaluates which of these are actual words using a word list data file.

1. Open a new **Builder Window** (CTRL+N) and write the following code:

```ecl
STRING Word := 'FRED' :STORED('Word');
R := RECORD
    STRING SoFar {MAXLENGTH(200)};
    STRING Rest {MAXLENGTH(200)};
END;
Init := DATASET([{'',Word}],R);
R Pluck1(DATASET(R) infile) := FUNCTION
    R TakeOne(R le, UNSIGNED1 c) := TRANSFORM
        SELF.SoFar := le.SoFar + le.Rest[c];
        SELF.Rest := le.Rest[..c-1]+le.Rest[c+1..];
    // Boundary Conditions handled automatically
    END;
RETURN NORMALIZE(infile,LENGTH(LEFT.Rest),TakeOne(LEFT,COUNTER));
END;
L := LOOP(Init,LENGTH(TRIM(Word)),Pluck1(ROWS(LEFT)));
OUTPUT(L);
```

2. Select **thor** as your target cluster.

3. Press the syntax check button on the main toolbar (or press F7)
4. Press the **Submit** button (or press CTRL+ENTER).

**Figure 19. Completed job**

The green check mark indicates successful completion.
5. Click on the workunit number tab and then on the Result 1 tab to see the output.

**Figure 20. Completed job output**
Roxie Example: Anagram2

In this example, we will download an open source data file of dictionary words, spray that file to our Thor cluster, then validate our anagrams against that file so that we determine which are valid words. The validation step uses a JOIN of the anagram list to the dictionary file. Using an index and a keyed join would be more efficient, but this serves as a simple example.

Download the word list

We will download the word list from http://wordlist.sourceforge.net/

1. Download the Official 12 Dicts Package

2. Extract the 2of12.txt file to a folder on your local machine. The files are available in tar.gz or ZIP format.

Load the Dictionary File to your Landing Zone

In this step, you will copy the data files to a location from which it can be sprayed to your HPCC cluster. A Landing Zone is a storage location attached to your HPCC. It has a utility running to facilitate file spraying to a cluster.

For smaller data files, maximum of 2GB, you can use the upload/download file utility in ECL Watch. This data file is only ~400 kb.

Next you will distribute (or Spray) the dataset to all the nodes in the HPCC cluster. The power of the HPCC comes from its ability to assign multiple processors to work on different portions of the data file in parallel. Even though the VM Edition only has a single node, the data must be sprayed to the cluster.

1. In your browser, go to the ECL Watch URL. For example, http://nnn.nnn.nnn.nnn:8010, where nnn.nnn.nnn.nnn is your ESP Server's IP address.

Your IP address could be different from the ones provided in the example images. Please use the IP address provided by your installation.
2. From ECL Watch page, click on the **Upload/download File** link in the menu on the left side.

**Figure 21. Upload/download**

Once you click on the Upload/download file link, it will take you to the Dropzones and Files page, where you can choose to **Browse** your machine for a file to upload:

**Figure 22. Dropzones and Files**

3. Press the **Browse** button to browse the files on your local machine, select the file to upload and then press the **Open** button.

The file you selected should appear in the **Select a file to upload** field. The data file is named: **2of12.txt**.

4. Press on **Upload Now** to complete the file upload.
Spray the Data File to your *Data Refinery (Thor) Cluster*

To use the data file in our HPCC system, we must “spray” it to all the nodes. A *spray* or *import* is the relocation of a data file from one location (such as a Landing Zone) to multiple file parts on nodes in a cluster.

The distributed or sprayed file is given a *logical-file-name* as follows: `thor::word_list.csv` The system maintains a list of logical files and the corresponding physical file locations of the file parts.

1. Open ECL Watch using the following URL:

   http://nnn.nnn.nnn.nnn:pppp(where nnn.nnn.nnn.nnn is your ESP Server’s IP Address and pppp is the port. The default port is 8010)

2. CLICK on the Spray Delimited hyperlink under the DFU Files menu on the left.

   **Figure 23. Spray Delimited**

   The DFU Spray Delimited page displays.

   The IP Address is automatically filled and the Local Path is partially filled with the default folder on your landing zone. Note: The VM and Community Edition typically only has one landing zone defined.

4. Complete the Local Path to include the complete file name or use the *Choose File* button to select the file from a list of files in the folder. The file is 2of12.txt.
5. Fill in the rest of the parameters (if they are not filled in already).

- Max Record Length 8192
- Separator \
- Line Terminator \n,\n
- Quote: ‘

6. Fill in the Label using the Logical File name desired: thor::word_list_csv

7. Make sure the Overwrite and Replicate boxes are checked.

Figure 24. Spray the File

Note: The Replicate option is only available on systems where replication has been enabled.
8. Press the Submit button

**Figure 25. View Progress**

9. Click the View Progress link
10. The Workunit progress page displays.

**Figure 26. Workunit Progress**

<table>
<thead>
<tr>
<th>ID</th>
<th>D20110614-220002</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>KB Per Second</td>
<td>326</td>
</tr>
</tbody>
</table>

**Run the query on Thor**

1. Open a new **Builder Window** (CTRL+N) and write the following code:

```hpcc
IMPORT Std;
layout_word_list := record
  string word;
end;
File_Word_List := dataset('~thor::word_list_csv', layout_word_list,
  CSV(heading(1),separator(','),quote('')));
STRING Word := 'teacher' :STORED('Word');
STRING SortString(STRING input) := FUNCTION
  OneChar := RECORD
    STRING c;
  END;
  OneChar MakeSingle(OneChar L, unsigned pos) := TRANSFORM
    SELF.c := L.c[pos];
  END;
  Split := NORMALIZE(DATASET([input],OneChar), LENGTH(input),
    MakeSingle(LEFT,COUNTER));
  SortedSplit := SORT(Split, c);
  OneChar Recombine(OneChar L, OneChar R) := TRANSFORM
    SELF.c := L.c+R.c;
  END;
  Recombined := ROLLUP(SortedSplit, Recombine(LEFT, RIGHT),ALL);
RETURN Recombined[1].c;
END;
STRING CleanedWord := SortString(TRIM(Std.Str.ToUpperCase(Word)));
R := RECORD
  STRING SoFar {MAXLENGTH(200)};
  STRING Rest {MAXLENGTH(200)};
END;
Init := DATASET([{'',CleanedWord}],R);
R Pluck1(DATASET(R) infile) := FUNCTION
  R TakeOne(R le, UNSIGNED1 c) := TRANSFORM
    SELF.SoFar := le.SoFar + le.Rest[c];
```

© 2013 HPCC Systems. All rights reserved
2. Select **thor** as your target cluster.

3. Press the syntax check button on the main toolbar (or press F7)

4. Press the **Submit** button.

5. When it completes, select the Workunit tab, then select the Result tab.

6. Examine the result.
Compile and Publish the query to Roxie

1. RT-CLICK on the MyFiles folder in the Repository window, and select Insert Folder from the pop-up menu.

   Figure 27. Insert Folder

2. Enter Anagram for the label, then press the OK button.

   Figure 28. Enter Folder Label

3. RT-CLICK on the Anagram Folder, and select Insert File from the pop-up menu.
4. Enter `ValidateAnagrams` for the label, then press the OK button.

A Builder Window opens.

Figure 29. Builder Window

5. Write the following code (you can copy the code from the other builder window):

```ecl
IMPORT Std;
layout_word_list := record
  string word;
end;
File_Word_List := dataset('thor::word_list_csv', layout_word_list,
  CSV(heading(1), separator(','), quote('')));
STRING Word := 'teacher' :STORED('Word');
STRING SortString(STRING input) := FUNCTION
  OneChar := RECORD
    STRING c;
  END;
  OneChar MakeSingle(OneChar L, unsigned pos) := TRANSFORM
    SELF.c := L.c[pos];
  END;
  Split := NORMALIZE(DATASET([input],OneChar), LENGTH(input),
    MakeSingle(LEFT,COUNTER));
  SortedSplit := SORT(Split, c);
  OneChar Recombine(OneChar L, OneChar R) := TRANSFORM
    SELF.c := L.c+R.c;
  END;
  Recombined := ROLLUP(SortedSplit, Recombine(LEFT, RIGHT),ALL);
  RETURN Recombined[1].c;
END;
STRING CleanedWord := SortString(TRIM(Std.Str.ToUpperCase(Word)));
R := RECORD
  STRING SoFar {MAXLENGTH(200)};
```
6. Select **Roxie** as your target cluster.

7. Press the syntax check button on the main toolbar (or press F7)

8. In the Builder window, in the upper left corner the **Submit** button has a drop down arrow next to it. Select the arrow to expose the **Compile** option.

**Figure 30. Compile**

9. Select **Compile**

10. When it completes, select the Workunit tab, then select the Result tab.
11. When the workunit finishes, it will display a green circle indicating it has compiled.

**Figure 31. Compiled**

![Compiled Image]

**Publish the Roxie query**

Next we will publish the query to a Roxie Cluster.

1. Select the workunit tab for the ValidateAnagrams that you just compiled.

2. Select the ECL Watch tab.
3. Press the **Publish** button (you may need to scroll down the main window)

**Figure 32. Publish Query**

When it successfully publishes, you will see:

**Figure 33. Workunit Published**

**Run the Roxie Query in WsECL**

Now that the query is published to a Roxie cluster, we can run it using the WsECL service. Using the following URL:

http://nnn.nnn.nnn.nnn:pppp (where nnn.nnn.nnn.nnn is your ESP Server’s IP address and pppp is the port. The default port is 8002)
1. Click on the + sign next to myroxie to expand the tree.

2. Click on the ValidateAnagrams.1 hyperlink.

The form for the service displays.

**Figure 34. RoxieECL**

3. Select Output Tables in the drop list.
4. Provide a word to make anagrams from (e.g., TEACHER), then press the Submit button.

The results display.

**Figure 35. RoxieResults**
Working with data files

Once you start working with your HPCC system, you will want to process some real data, this section shows you how to load data to your HPCC system.

Before you begin

A typical production HPCC system would have much more data capacity than using a virtual system for testing purposes. The size of the file you wish to work with is limited by the size of your virtual machine.

- The virtual machine has a limit of 20GB.
- The size of the file(s) you can work with in your virtual machine is also limited by your machine's available disk space. Make sure you have adequate disk space available.

If you exceed the file size limits your VM state will not be saved and you risk losing your work. Make sure that you have ample space to not only store your data, but your virtual machine's "state" to be able to save your work.
Uploading a file

For smaller data files, maximum of 2GB, you can use the upload/download file utility in ECL Watch.

1. In your browser, go to the **ECL Watch** URL displayed (circled in red) in Figure 2, “VM Welcome Screen”. For example, http://nnn.nnn.nnn.nnn:8010, where nnn.nnn.nnn.nnn is your Virtual Machine's IP address.

⚠️ Your virtual IP address could be different from the ones provided in the example images. Please use the IP address provided by your installation.
2. From ECL Watch page, click on the **Upload/download File** link in the menu on the left side.

**Figure 36. Upload/download**

Once you click on the Upload/download file link, it will take you to the dropzones and files page, where you can choose to **Browse** your machine for a file to upload:

**Figure 37. Dropzones**

3. Press the **Browse** button to browse the files on your local machine, select the file to upload and then click **Open** button.

The file you selected should appear in the **Select a file to upload** field.

4. Press on **Upload Now** to complete the file upload.
5. Now that the file is on your Landing Zone, you can spray the file to your cluster and write ECL code to process it.

# Uploading files with a Secure Copy Client

To upload a large file for processing to your virtual machine, you will need a tool that supports the secure copy protocol. In this section, we discuss using WinSCP. There are other tools available, but the steps are similar.

1. Open the WinSCP tool, and login to your Virtual Machine’s IP address using the username and password given.

<table>
<thead>
<tr>
<th>Login ID</th>
<th>hpccdemo</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password</td>
<td>hpccdemo</td>
</tr>
</tbody>
</table>

2. Once logged in, it should, navigate automatically to the landing zone folder. (/var/lib/HPCCSystems/mydropzone)

3. Navigate to where your local file is in the left part of the window.

**Figure 38. WinSCP**

4. Select the data file to send and copy it to the landing zone, using drag-and-drop.

5. Now that the file is on your Landing Zone, you can spray the file to your cluster and write ECL code to process it.
Next Steps

Available from the menu in ECL Watch are several documents which provide details on various aspects of the HPCC.

Figure 39. ECL Watch Resource Page

You can also access them from the help menu: Help >> Download Resources.
To familiarize yourself with what your system can do, we recommend:

- **The HPCC Data Tutorial**

  This is a simple, step-by-step tutorial that shows the end-to-end process from receiving a raw data file to publishing a web-based query to search the data. Along the way, you will learn how to process the data, index it, then write and publish a query to search the data. The self-led tutorial and accompanying data file is available on the ECL Watch Resource Page.

- **The Six Degrees of Kevin Bacon Example**

  This is a more complex example (*also available on the ECL Watch Resource Page) that uses a database of movie data to find the degree of separation between actors in films.

- **The HPCC Systems Portal** ([http://hpccsystems.com](http://hpccsystems.com)) is another valuable resource for more information including:
  - Video Tutorials
  - Additional examples
  - White Papers
  - Documentation
  - Support Forums
Frequently Asked Questions

1. Can I run the VM while connected to my network using a Virtual Private network (VPN)?
   No. Most VPN clients take control of your network device and routing and do not allow split tunnels.

2. Can I install this virtual machine on multiple nodes?
   No. If you want to evaluate a multi-node system, you should use the Community version available from the HPCC Systems Portal at http://hpccsystems.com.

3. What are the limits of this version?
   The HPCC VM Edition runs on a single node, has a limit of 20 GB in it workspace, and doesn't support custom configurations.

4. Can I run the VM on my Linux machine?
   You can run the HPCC VM using the Linux VM Player. The HPCC ECL IDE is a Windows application, but can run under WINE. See the Client Tools Manual for details.

5. Can I run the VM on my Mac?
   Not at this time. There is no Mac version of the VM Player.

6. Can I run the VM on my Windows Server?
   Yes, You can run on Windows Server 2003 or 2008, providing you have access to it using Remote Desktop Protocol (RDP).

7. Do I need a 64-bit processor to run the VM Edition?
   No. The VM Player runs in either 32- or 64-bit environments and does not require a 64-bit processor.

8. Do I need a 64-bit processor to run the Community Edition?
   Yes. Community Edition binaries run natively on 64-bit Linux server(s). You can access that HPCC from any Windows workstation (32- or 64-bit) that can run the ECL IDE and a supported browser.

9. What happens to my work when I close the virtual machine?
   The VM Player saves the state of your system when it closes. It saves all of your workunit information, data files, and published query sets as long as there is available space. The maximum size of the saved session is 20 GB.

10. Why won't my VM allow access to my network interface?
    Check your Firewall settings. You may need to disable the Firewall for your VM's network interface.

11. Will this version utilize my multi-core processor?
    This VM is designed to utilize a single core.

12. Where can I find more information?
