HPCC Data Handling

Introduction

There are a number of different ways in which data may be transferred to, from, or within an HPCC system. For each of these data transfers, there are a few key parameters that must be known.

Prerequisites for most file movements:

- Logical filename
- Physical filename
- Record size (fixed)
- Source directory
- Destination directory
- Dali IP address (source and/or destination)
- Landing Zone IP address

The above parameters are used for these major data handling methods:

- Import Spraying Data from the Landing Zone to Thor
- Export Despraying Data from Thor to Landing Zone
- Copy Replicating Data from Thor to Thor (within same Dali File System)
- Copying Data from Thor to Thor (between different Dali File Systems)

Data Handling Terms

A *spray* or *import* is the relocation of a data file from one location (such as a Landing Zone) to a Data Refinery cluster. The term spray was adopted due to the nature of the file movement – the file is partitioned across all nodes within a cluster.

A *despray* or *export* is the relocation of a data file from a Data Refinery cluster to a single machine location (such as a Landing Zone). The term despray was adopted due to the nature of the file movement – the file is reassembled from its parts on all nodes in the cluster and placed in a single file on the destination.

A copy is the replication of a data file from one Data Refinery cluster to another cluster within the same environment.

A *Remote copy* is the replication of a data file from one Data Refinery cluster to another cluster in a different environment.

A *Landing Zone* (or Drop Zone) is a physical storage location defined in your system's environment. There can be one or more of these locations defined. A daemon (DaFileSrv) must be running on that server to enable file sprays and desprays.

Working with data files

Once you start working with your HPCC system, you will want to process some real data, this section shows you how to load data to your HPCC system.

Before you begin

First, you should consider the size of the data and the capacity of your system. A typical production HPCC system would have much more data capacity than a development system. The size of the files you wish to work with is limited by the size of your system.

Uploading a file

For smaller data files, maximum of 2GB, you can use the upload/download file utility in ECL Watch.

1. In your browser, go to the ECL Watch URL displayed example, http://nnn.nnn.nnn.8010, where nnn.nnn.nnn is your ESP Server's IP address.

Your IP address could be different from the ones provided in the example images. Please use the IP address provided by **your** installation.

2. From ECL Watch page, click on the Upload/download File link in the menu on the left side.

Figure 1. Upload/download

Once you click on the Upload/download file link, it will take you to the dropzones and files page, where you can choose to **Browse** your machine for a file to upload:

HPCC System	IS	EclWatch	Enterprise Service Platform
Clusters E	Dropzones and Files		
ECL Workunits	Machine/dropzone:	localhost/mydropzone 🛩	
learch browce	IP Address:	10.229.219.3	1

Tepelegy	Select a file to upload:		Browse. Upload Now
arcet Clusters Juster Processes system Servers DPU Workunits inarch Proventies teles teles teles teles teles teles teles	No file found in this drop	zone.	

3. Press the **Browse** button to browse the files on your local machine, select the file to upload and then click **Open** button.

The file you selected should appear in the Select a file to upload field.

4. Press on Upload Now to complete the file upload.

Uploading files with a Secure Copy Client

To upload a large file for processing to your virtual machine, you will need a tool that supports the secure copy protocol. In this section, we discuss using WinSCP. There are other tools available, but the steps are similar.

1. Open the WinSCP tool, and login to your Virtual Machine's IP address using the username and password given.

Login ID:	hpccdemo
Password:	hpccdemo

2. Once logged in, it should, navigate automatically to the landing zone folder. (/var/lib/LexisNexis/mydropzone)

3. Navigate to where your local file is in the left part of the window.

4. Select the data file to send and copy it to the landing zone, using drag-and-drop.

Data Handling Methods

There are several ways to spray, despray, or copy data files:

- The DFU interface in Ecl Watch
- The DFU Plus command line utility

See the Client Tools manual for details

• Using ECL Code and FileServices library functions.

See the ECL Language Reference for details.

Data Handling Using ECL Watch

• Login to ECL Watch for the environment.

The URL is the IP address where the ESP Server is installed plus the port to which the wssmc service is bound. The default port is 8010. For example:

http://<ESPserverIP>:8010/

• Click on the Browse Logical Files hyperlink below DFU Files in the menu on the left.

The Logical Files page displays showing all files with logical entries in the Dali Server's Distributed File System.

From this page, you can despray or copy any file.

Desprays

- Locate the file to despray in the list of files, then select the arrow graphic on the left hand side, then select **Despray** from the pop-up menu.
- Check the **Source** information that is already filled in.
- Provide **Destination** information.

Destination-Ma- chine	Use the drop-list to select the machine to despray to. The items in the list are landing zones defined in the system's confgura- tion.
Destination-IP Ad- dress	This is prefilled based upon the selected machine.
Destination-Local Path	Provide the complete file path of the destination including file name and extention.

Destination-Net-	The complete network path of the destination including file
work Path	name and extension. (read only)
Overwrite	Check this box to overwrite a file with the same name if it exists.

• Press the **Submit** button.

The DFU Workunit displays.

• Press the **Refresh** button periodically until the status of your request indicates it is **Finished** or click on the **View Progress** hyperlink to see a progress indicator.

The Progress window shows a green progress bar indicating the percentage of completion, as well as other information related to the operation.

If a job fails, information related to the cause of the failure also displays.

Spray Fixed

• Click on the Spray Fixed hyperlink below DFU in the menu on the left.

The Spray Fixed page displays.

• Fill in Source information (Machine, IP, File Path, and record length) and the Destination information (Groupand Label).

Source:	
Machine	Use the drop-list to select the machine where the source file is located.
IP	IP address of machine from which to spray. This is automati- cally completed when you select the Source Machine .
Local Path	The file path of source file to spray.
Record Length	The size of each record.

Destination:	
Group	Select the name of THOR cluster to spray to.
Label	The logical name that you choose for the file.
Options:	
Overwrite	Check this box to overwrite files of the same name.
Replicate	Check this box to create backup copies of all file parts exist in the backup directory (by convention on the secondary drive of the node following in the cluster).
Compress	Check this box to compress the files.

• Press the **Submit** button.

The DFU Workunit displays.

• Press the **Refresh**button periodically until the status of your request indicates it is **Finished** or click on the **View Progress** hyperlink to see a progress indicator.

You can use the Choose File button to look up files on the selected source machine.

Spray CSV

• Click on the Spray CSV hyperlink below DFU in the menu on the left.

The Spray CSV page displays.

• Fill in Source information (Machine, IP, File Path, and record information) and the Destination information (Group and Label).

Source:		
Machine	Use the drop-list to select the machine where the source file is located.	
IP	IP address of machine from which to spray. This is automati- cally completed when you select the Source Machine .	
Local Path	The file path of source file to spray.	
Max Record Length	The length of longest record in the file.	
Separator	The character used as a separator in the source file.	
Line Terminator	The character used as a line terminator in the source file.	
Quote	The character used as a quote in the source file.	
Destination:		
Group	Select the name of THOR cluster to spray to.	
Label	The logical name that you choose for the file.	
Options:		
Overwrite	Check this box to overwrite files of the same name.	
Replicate	Check this box to create backup copies of all file parts exist in the backup directory (by convention on the secondary drive of the node following in the cluster).	

Compress Check this box to compress the files.

• Press the **Submit** button.

The **DFU Workunit** displays.

• Press the **Refresh** button periodically until the status of your request indicates it is **Finished**or click on the **View Progress** hyperlink to see a progress indicator.

You can use the Choose File button to look up files on the selected source machine.

Spray XML

• Click on the Spray XML hyperlink below DFU in the menu on the left.

The Spray XML page displays.

• Fill in Source information (Machine, IP, File Path, and record information) and the Destination information (Group and Label).

Source:	
Machine	Use the drop-list to select the machine where the source file is located.
IP	IP address of machine from which to spray. This is automati- cally completed when you select the Source Machine .
Local Path	The file path of source file to spray.
Format	Select the file format from the drop-list.
Max Record Length	The length of longest record in the file.
Row Tag	The record separator tag in the XML file
Destination:	
Group	Select the name of THOR cluster to spray to.
Label	The logical name that you choose for the file.
Options:	
Overwrite	Check this box to overwrite files of the same name.
Replicate	Check this box to create backup copies of all file parts exist in the backup directory (by convention on the d: drive of the node following in the cluster).
Compress	Check this box to compress the files.

• Press the **Submit** button.

The **DFU Workunit** displays.

• Press the **Refresh** button periodically until the status of your request indicates it is **Finished** or click on the **View Progress** hyperlink to see a progress indicator.

You can use the Choose File button to look up files on the selected source machine.

Сору

- Locate the file to copy in the list of files, then click on the arrow icon, then select **Copy** from the pop-up menu..
- Fill in **Destination** and **Options** information.

De	stination:	
Group		Select the name of THOR cluster to copy to.
	Note	You can only choose from THOR clusters within the current environment.
Logical File	e	The logical name for the copied file.
File Mask		Automatically updated based on logical file name entered.
	Options:	
Replicate		Check this box to create backup copies of all file parts exist in the backup directory (by convention on the second drive of the node following in the cluster).
Wrap		Check this box to keep the number of parts the same and wrap if the target cluster is smaller that the original.
Overwrite		Check this box to overwrite files of the same name.
Compress		Check this box to compress the files.
Retain Structure	Superfile	Check this box to retain the superfile structure.

• Press the **Submit** button.

The DFU Workunit displays.

• Press the **Refresh** button periodically until the status of your request indicates it is **Finished** or click on the **View Progress** hyperlink to see a progress indicator.

Remote Copy

Remote Copy allows you to copy data from a Thor cluster outside your environment to the one in your environment.

• Click on the **Remote Copy** hyperlink below **DFU** in the menu on the left.

The Copy File page displays.

• Fill in Source, Destination, and Options information.

Source:

Logical File	The logical file name in the remote environment.
Source Dali	The Dali Server in the remote environment
Source Username	A valid user in the remote environment
Source Password	The password for the user in the remote environment

Destination:	
Group	Select the name of THOR cluster to copy to.
Note	You can only choose from THOR clusters within the current environment.
Logical Name	The logical name for the copied file.
Options:	
Replicate	Check this box to create backup copies of all file parts exist in the backup directory (by convention on the d: drive of the node following in the cluster).
Wrap	Check this box to keep the number of parts the same and wrap if the target cluster is smaller that the original.
Overwrite	Check this box to overwrite files of the same name.
Compress	Check this box to compress the files.
Retain Superfile Structure	Check this box to retain the superfile structure.

• Press the Submit button.

The DFU Workunit displays.

· Press the Refresh button periodically until the status of your request indicates it is Finished or click on the View Progress hyperlink to see a progress indicator.

Modifying a DFU Workunit

From the DFU Workunit page, you can modify and run any DFU Spray, Despray, Copy, or Remote Copy action using the modified settings. This allows you to run similar jobs without filling in similar details again. It also allows you to correct any errors that might have caused a DFU workunit to fail.

From any DFU Workunit page:

• Press the Modify button.

The page for the original action displays.

- Modify the details, as needed.
- Press the Submit button.

The DFU Workunit displays.

• Press the Refresh button periodically until the status of your request indicates it is Finished or click on the View Progress hyperlink to see a progress indicator.
